

C9 Slide and Rotate

Adapter

Our C9 slide and turn adapter is designed to cater for professional businesses and individuals who have committed to a CPU tower and want the best CPU storage solution possible. The C9 can be used with the C2, C3 or C4 Metalicon CPU holders.

This adapter allows users to lower their CPU holder from the underside of the desk, clearing support joists, cable trays and other obstructions. C9 enables the user to slide their CPU back and forth to create more space under the desk. Users can even rotate their CPU holder to sit flush against a pedestal or wall to further maximise the use of space and gain easy access to ports on their machine.
